Mob: +1 (647) 978-9947
Address: 152 Cornerstone Grove NE, Calgary, AB
Email: ricky_4567@yahoo.co.in

Professional Summary

Experienced Full Stack Web Developer with over 11 years of expertise in JavaScript, Python and PHP frameworks/CMS platforms. Proficient in creating, managing, designing, and developing websites using the latest technologies and tools. Skilled in project management, including business requirements analysis, documentation in Confluence, use case development, and the successful delivery of key initiatives.

Adept in a wide range of technologies and tools, including JIRA, Trello, AzureDevOp, DevContainer, Confluence, GitHub, AWS, OpenShift, Jenkins, Atlassian Suite, BitBucket, GitLab, Docker, FileZilla, and server management tools (XAMPP, WAMP, MAMP). Also experienced in modern development frameworks and languages such as ReactJS, VueJS, NodeJS, Core PHP, Python, CMS (WordPress), and MVC frameworks like Laravel and CodeIgniter, as well as RESTful APIs and Micro Services. Seeking an opportunity to leverage technical expertise to drive business objectives and innovation.

Committed to making a meaningful impact by dedicating 100% effort to professional and personal growth. Aspiring not only to excel as a Web Developer but also to evolve holistically as an individual, continuously enhancing skills, embracing challenges, and contributing to both organizational success and personal development.

Education

Bachelor of Engg. & Tech.(CSE) from **Punjab Technical Uni. Jalandhar, India**, 2010 - 2013

Canadian Equivalency: Bachelor's degree (Four years)

Diploma in computer science engineering from **PSBTE, Chandigarh India**, 2009 - 2010 *Canadian Equivalency: Secondary school diploma (two years)*

Experience

Full Stack Developer(IT Consultant) at CGI Inc. Canada, May 2022 - Present

Contracted to large public sector and energy clients across Canada & the US.

Technology Used: Vue.js, React.js, Node.js, Express.js, Form.io, Python, Java, PostgreSQL, MSSQL, Oracle, Keycloak, OpenShift, AWS, GitHub Actions, GitFlow, Terraform, Docker, CI/CD

Responsibilities Across Projects :

- Manage and develop highly scaled enterprise applications built with Vue.js, React, Python, Node.js and Java, deployed across OpenShift, on-premise infrastructure, and AWS cloud environments.
- Lead development of new features, enhancements, and bug fixes, ensuring alignment with business requirements and government digital standards.
- Design, build, and maintain end-to-end test coverage (unit, integration, and regression tests) using Jest, Mocha, and automated pipelines to ensure long-term reliability.
- Administer AWS services, OpenShift clusters, and Keycloak realms for identity, access control, environment configuration, and security governance.
- Develop and maintain complex multi-step forms using Form.io with advanced conditional logic, calculations, and form-availability scheduling.
- Support cross-functional teams, mentor junior developers, and collaborate with business analysts, operations groups, and product owners to deliver enterprise-grade solutions.
- Follow Agile SDLC, participate in sprint planning, backlog refinement, daily standups, and retrospective ceremonies.

Projects :

- <https://phlat.hlth.gov.bc.ca/app/> (Lead Developer)
 - GitHub Repo: <https://github.com/bcgov/moh-phlat>

Full Stack Developer at Zouk Design, Mohali, India, August 2021 - February 2022

Technology Used: ReactJS, NodeJS, AWS, EC2, Elastic beanstalk, AWS Amplify, RDS

Responsibilities:

- Develop RESTful APIs using Node.js and Laravel Lumen to support scalable backend architecture.
- Implement responsive designs in React.js for dynamic and user-friendly front-end templates.
- Integrate backend API endpoints to ensure seamless communication between the server and client applications.
- Build and manage CI/CD pipelines on AWS for automated deployment and continuous integration.
- Provide leadership and mentorship to the development team, ensuring project alignment and skill development.
- Adhere to industry best practices in the software development life cycle (SDLC), utilizing agile methodologies and scrum ceremonies.
- Troubleshoot, test, and maintain backend code and databases to ensure optimal performance, reliability, and scalability across the application.

Full Stack Engineer at Bo-we ApS (Remote), Rønne, Denmark, May 2020 - July 2021

Technologies Used: React.js, Node.js, MongoDB, AWS Elastic Beanstalk, AWS Amplify, Google Cloud Platform, Steam API

Responsibilities:

- Developed scalable RESTful APIs using Node.js and maintained backend architecture for optimal performance.
- Designed, modeled, and maintained MongoDB databases, ensuring data integrity and high availability.
- Translated UI/UX designs into responsive React.js components and reusable front-end templates.
- Integrated backend API endpoints and implemented secure, efficient communication between services.
- Collaborated closely with QA teams to support testing cycles, resolve issues, and ensure smooth project delivery.
- Integrated third-party services, including Steam API, to enhance platform functionality.
- Followed Agile best practices, contributing to sprint planning, daily standups, and iterative development.
- Troubleshooted, tested, and optimized backend services and databases to improve performance, scalability, and reliability.

Project URL: <https://leagues.gg/>

Full Stack Engineer at Krescent IT Labs Pvt. Ltd., Chandigarh, IN, Mar 2017 - April 2020

Technology Used: ReactJS, Nodejs, PHP, MYSQL, RESTFUL APIs, Laravel, WordPress, OpenCart

Responsibilities:

- Managing and developing different features of the project using HTML, CSS, PHP, MYSQL, LARAVEL etc.
- Create RESTFUL APIs for the web and mobile team

- Develop new features and maintain existing features on the backend system using PHP and MYSQL
- Collaborate with the Product Manager and members of the technical team to assess and implement new system requirements
- Follow best practices in the software development life cycle using the agile methodology.
- Troubleshoot, test and maintain the backend code and databases to ensure strong optimization, functionality and scalability.

Web Developer (PHP) at Wave Infotech, Chandigarh, IN, Jan 2014 - Mar 2017

Technology Used: PHP, Laravel, WordPress

Responsibilities :

- Build websites using WORDPRESS.
- Write code using HTML and CSS.
- Creating custom themes in WORDPRESS.
- Involved in the sprint planning, retrospective, and technical discussions.
- Grooming on different Epic, Stories and tasks.
- Involved in different design sessions and strategies to accomplish the task.
- Scheduling and planning Epic and stories into sub-tasks.
- Analyzing the code and fixing bugs as per the coding standards.
- Database design and maintenance.

Additional Capabilities

- Deep experience aligning with **government accessibility, security, and digital service standards.**
- Strong background across multiple programming languages and frameworks (JS/TS, PHP, Python)
- Skilled in cloud-native engineering, containerization, DevOps practices, and infrastructure-as-code.

Interests

- AWS Certifications, SAFe, & Learning new things related to programming language.
- Reading books and novels
- Listening to Music

Technical Skills

Frontend: React, TypeScript, VueJS, Vite, TanStack Router, TanStack Query, AG Grid (Enterprise), AG Charts, Radix UI, Headless UI, Tailwind CSS, Storybook, DnD Kit, React Hook Form, Zod, React Datepickers

State Management: Zustand, Immer

Backend & APIs: Node.js, Express.js, Axios, RESTful APIs, Authentication (MSAL - Azure AD, OAuth, JWT), Form.io

Testing & Quality: Playwright, Storybook Test Runner, Performance Debugging (Why-Did-You-Render), ESLint/Prettier (TypeScript + Tailwind setup), Husky & lint-staged

Databases: MySQL, PostgreSQL, MongoDB

Cloud & DevOps: AWS (EC2, S3, RDS, IAM), Docker, CI/CD Pipelines

Build & Tooling: TypeScript, PostCSS, Autoprefixer, Git Flow, Git, GitHub, Jira, VS Code
